

International Logistics: Management and Engineering

· Research-based Teaching ·

(M. Hülsmann & C. Meyer · m.huelsmann/c.meyer@jacobs-university.de)

Study programs in International Logistics lead to a Bachelor of Science, a Master of Science or a PhD. They integrate aspects of management and engineering, enabling students to meet the changing demands in the increasingly open and global field of logistics.

Programs are highly

- ▶ interactive: “Hands on-courses and projects”.
- ▶ international: “Students from all over the world”.
- ▶ integrated: “on the spot with companies”.

Hands on: Industrial and Research Projects (Bachelor's program)

- ▶ Students are actively involved in both research and industrial projects.
- ▶ The spectrum of projects includes key research and the development of industrial applications partly pursued through cooperation with international institutions and industrial partners.
- ▶ Students work in a dynamic environment and are able to improve their skills, such as academic writing, which is accomplished through close collaboration with PhD students and faculty-led research groups working on academic papers and presentations.

Hands on: Learning Business by doing Business (Bachelor's program)

- ▶ This simulation game creates a realistic market situation where several companies led by small groups of students compete amongst each other. It provides students for...
- ▶ ... applying theoretical knowledge and encountering the consequences of their actions,
- ▶ ... a comprehensive experience of economic interrelations,
- ▶ ... discussing and finding solutions in a group and apply them to a strategy,
- ▶ ... decision making in difficult and complex situations on a strategic level,
- ▶ ... fast and flexible thinking due to changes.

Hands on: Combining theoretical input and practical experience on the spot (Master's program)

- ▶ Some seminars are designed to combine theory and practical experience.
- ▶ Industrial partners that face interesting logistics problems work together with students to develop solutions to certain questions.
- ▶ Teams of students work under supervision of lecturers and company representatives.
- ▶ Kick-off meetings, workshops, final presentations and discussions in front of/ with the company's management are components of those seminars.

Excursion to „27th BVL Kongress“ (2010)
